

Reducing the pain of maintaining Dynamics 365

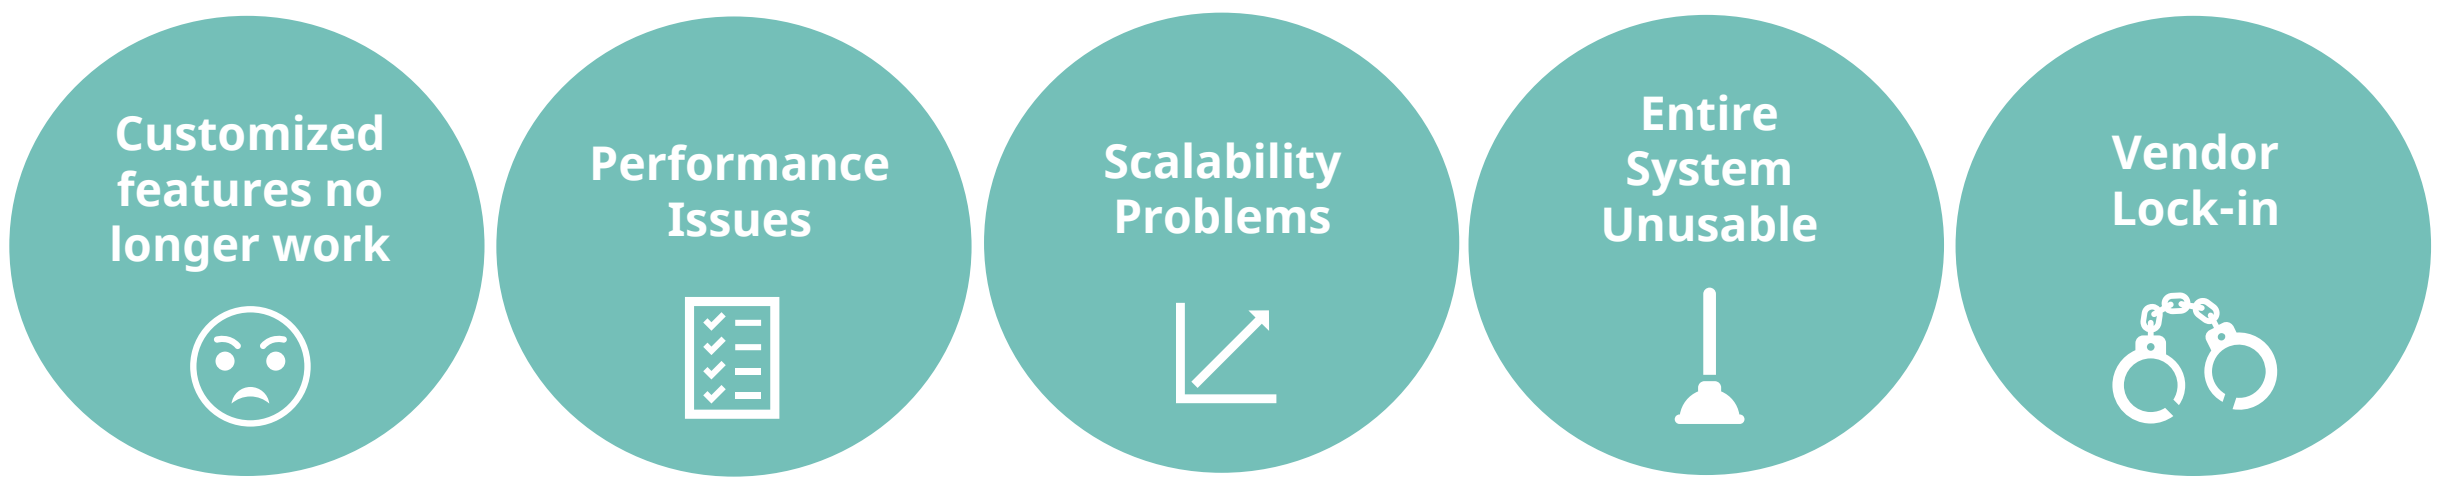

Why update Dynamics 365?

Why customize Dynamics 365?

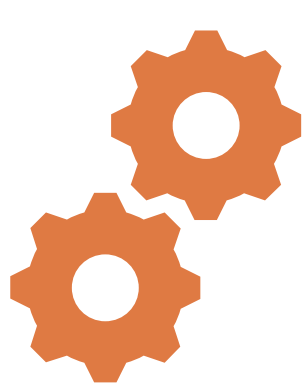

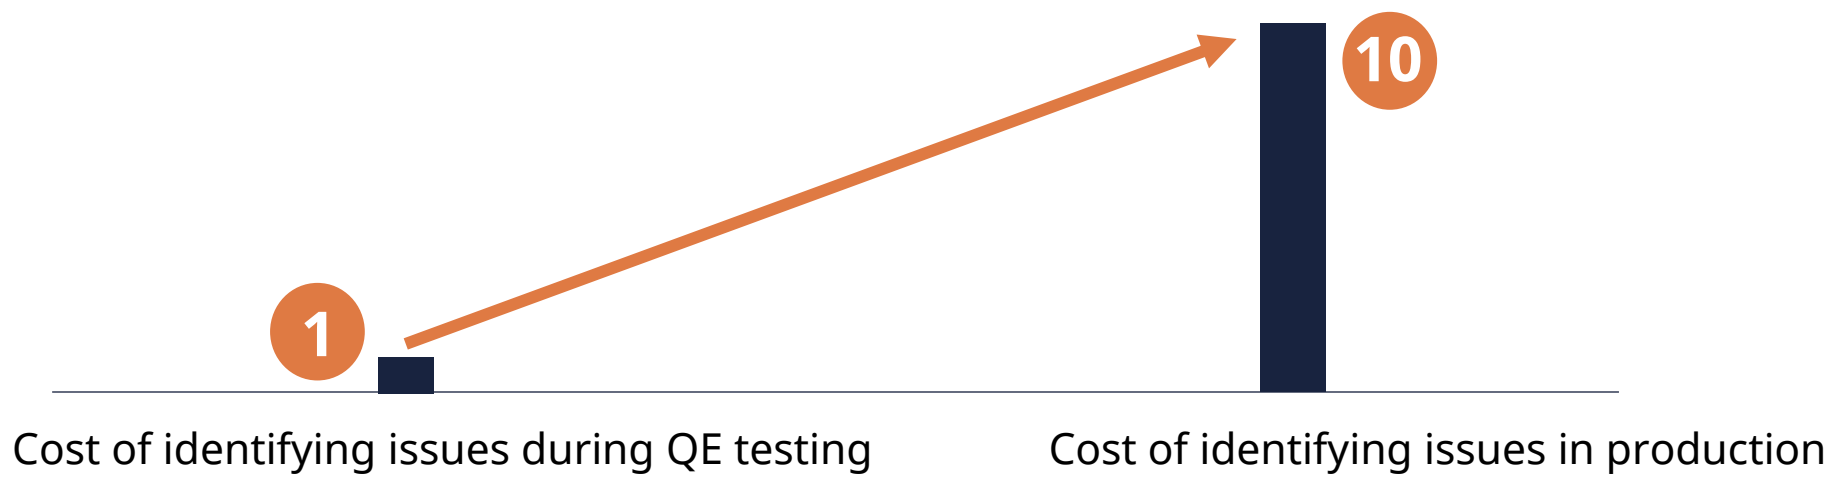

Typical issues with updating Dynamics 365?

The advantage of identifying issues before rollout

It costs **10 times more** to identify a bug after production deployment than during testing! ²

How Automation shortens test cycles and makes updates easier

Running tests 24x7

Distributing execution across multiple test environments

Providing robust reporting

Reducing regression testing cycles by up to **70%** ²

How Celsior can help

- Planning and QE strategy
- Automated QE testing of the ecosystem
- DevOps integration
- Ecosystem maintenance and support (level 2 and 3)
- Knowledge transfer

Contact us to discuss how we could help you make your Dynamics 365 environment more robust through easier updates and improved, less costly maintenance.
